SMSJET

1. Supports rich multimedia content via SMS, MMS, WAP and J2ME.
2. High volume inbound / outbound messaging infrastructure to reach over 500 networks in 170 countries.
3. Unified cross network short codes for all mobile networks.
4. Suite of modules for rapid creation of new services.
5. Subscription and pay-per-play billing engine.
6. Multiple payment methods including premium SMS, IVR and debit, credit and prepay card payments.
7. Web based client administration interface to manage and configure your services.
8. Full data capture and analysis of messages and subscriber demographics.

APPLICATION DEVELOPMENT

A licensed product from PT Semesta Tirta Antara Raya, our technical assistance in Malaysia. Custom designed mobile content applications including mass broadcasting, and corporate alerts. Companies will have to integrate mobile applications to their business in order to stay ahead.

The current services in the market mostly support only SMS applications. In the near future, WAP push and MMS will play an important role as technology evolves. Software solution companies will find a better competitive advantage with integrated mobile applications.

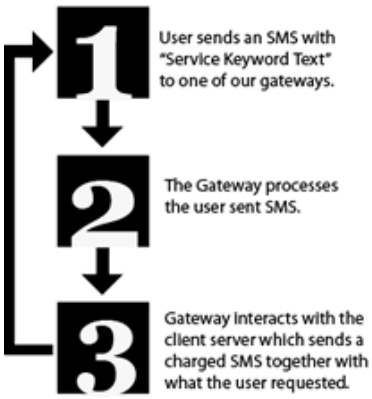
REVERSE CHARGE SMS

The smartest way to make micro-payments for products and services. Charge for access, information, multimedia content such as ringtones and logos, SMS voting and various other countless applications you can imagine.

It's a well-documented challenge, on how to build a valuable, and profitable revenue stream. Yet most companies offering premium content are struggling to find a workable business model.



Most use credit or debit card transactions, and have little success - with fraud, lazy customer attitudes, and the hassle of integrating secure solutions or the un-professionalism of outsourced payment solutions - it's hard to find a way to move forward. To provide a straight forward, easily deployable solution: we introduced reverse charge SMS.

This is a unique solution offering discrete, unbranded, secure and instant payment solutions that can be integrated within any system or service one has to offer.
