Mobile Solutions for Data Collection

GATHERdata™ A powerful tool that immediately turns data collected on mobiles into useful information, with real time access and automated analysis and reporting.

ICT for Health

AED-SATELLIFE has been a pioneer in promoting the use of information technology for better health in low-resource environments. That tradition continues today with the use of mobile computing devices for data collection and information dissemination. **More...**

ICT Projects

Uganda Health Information Network (UHIN) Supports health workers to collect data and access information using PDAs and the local celllular network.

AED-SATELLIFE has just concluded its successful 7 year UHIN project in Uganda. The Ministry of Health is incorporating the use of mobile IT to support data exchange and continuing provider education in the country. Read **Press Release;** articles in **The New Vision**, **New Science Journalism**

Mozambique Health Information Network (MHIN) Improves capacity to collect, transmit and report data using PDAs and the local cellular network.

GUIDE™ A content management system for converting very large clinical and health documents into a format for mobile computing devices.

Improve patient care > Save Lives

Every day, people in poor countries die unnecessarily from infectious diseases - malaria, tuberculosis, HIV/AIDS, pneumonia and diarrhea - as health workers do not have access to reliable information. AED-SATELLIFE's free health e-newsletters and discussion groups meet this need:

HealthNet News Receive e-newsletters to improve clinical and public health practice with content selected from peer-reviewed journals.

Health Discussion Groups Engage in global dialogue everyday with your colleagues on

Global Discussion Groups
